## 1.0 Project Overview

UML : Separated by package, attributes omitted due to complexity.

### DESIGN:

Model: the backend functionality is complete in the logic package.

Controller: the Game.java class acts as the controller and updates the view. The Game class instantiates the view manager.

View: The Gui package contains the views, which are updated by the controller.

### MAIN FEATURES:

Player vs computer.

Ai computer selects move which will provide highest score in next move.

Save the current game.

Load a game previously saved.

## 2.0 UML
